Coastal Blue Luster Zircon Fire Glass

Did you know that a majority of men prefer the color blue? And why not? Blue is a magnificent color! It's the color of the clear sky on a bright sunny morning, and it's the color of the sea. Studies have even shown that people feel more productive in blue colored environments and weight lifters are able to perform better in gyms with blue paint. So, you can't go wrong with blue, and your customers just can't go wrong with our Coastal blue luster zircon fire glass!

Reminiscent of blue pastel, this lovely Coastal blue fire glass is sure to be a hit whether used in indoor fireplaces or outdoor fire pits. It is especially suited to outdoor poolside areas to complement the surrounding shades. Infused with silica, when your customers light their fire feature these lovely jewel-like glass pieces will reflect and refract the light of the flame, amazing guests and enhancing the mood of the environment.

All our fire glass is made of unused glass that has undergone a unique 5-step manufacturing process which renders it its lovely shine and also allows it to withstand temperatures of up to 1300 degrees Fahrenheit without sustaining any damage or discoloration. Our tempered fire glass is not tumbled which ensures an enhanced shine. Used correctly, our Coastal blue luster zircon fire glass could last your customers a lifetime!

Another big advantage of our fire glass is that it does not emit any harmful chemicals, smoke, or soot, thus it is very easy to maintain. What a wonderful way to beautify the environment and also hide those unseemly pipes and tubes that are often visible in gas fire features!

If your customers love blue, then introduce them to our Coastal blue luster zircon fire glass!
